## OBJECTIVE

Computer Science undergraduate at Southern Arkansas University with experience in AI research, full-stack development, and Python-based software applications. Seeking opportunities in software engineering or research to continue growing as a developer.

## EDUCATION

**Bachelor of Science in Computer Science**, Southern Arkansas University, GPA: 3.9/4.0  
**Minor in Music**

**Expected May 2027**

## SKILLS

**Languages:** Python, Java, HTML, CSS

**Frameworks & Libraries:** Django, NumPy, OpenAI API

**Tools:** Git, VSCode, Microsoft Office

## EXPERIENCE

**Research Assistant** - SAU DART Research Team  
**August 2025 - February 2026**

- Annotated and prepared medical imaging datasets by creating detailed bounding boxes and segmentation masks for knee implants, supporting the training of AI models (SAM and YOLO).
- Assisted in the development and refinement of automated image segmentation workflows, contributing to improved efficiency and accuracy in medical imaging analysis.
- Collaborated with the research team to evaluate model performance, document limitations, and support ongoing improvements in AI-driven segmentation methods.

**Media Manager** - Southern Arkansas University Bands  
**August 2025 - Present**

- Designed and produced engaging visual content for SAU Band social media, strengthening brand identity and audience engagement.
- Revamped and maintained the SAU Band website, improving layout, usability, accessibility, and overall visual presentation.
- Collaborated with peers and directors to manage digital content while advancing skills in web design, Microsoft Office, and multimedia editing tools.

## PROJECTS

### Django Course Registration System

- Built a full-stack web application using Django following MVC architecture
- Implemented course management (view, add, enroll, drop) with enforced capacity constraints
- Designed system diagrams and applied design patterns to improve scalability and maintainability

### Interactive Discord AI Chatbot

- Developed a Discord chatbot powered by OpenAI API using Python
- Integrated context history management to maintain contextual responses across messages
- Implemented keyword-based command triggers for automated, real-time responses
